SEF Entropics Cat Bond Fund

SEF Entropics Cat Bond Fund aims for good risk adjusted returns uncorrelated with traditional assets such as stocks and bonds. The fund invests in a globally diversified portfolio of reinsurance risks covering natural catastrophes with focus on hurricanes and earthquakes. The fund has a responsible and sustainable investment style.

Historical return is not a guarantee for future returns. The money you invest in the Fund can increase as well as decrease and you cannot be certain to have the full investment returned. This report is not a recommendation to invest in the fund. Prior to an investment, you should consult the fund's key investor documentation available at en.entropics.se and other relevant documentation.

Manager's Note

After two consecutive years with record insurance losses on the cat bond market, premiums continued to increase in December. For the fund, the risk premium (coupon before risk-free interest rate and excluding distressed bonds) increased by 16% compared to a year ago. The interest rate difference between Sweden and the US has contributed negatively by slightly more than 250 forward points. For the full year 2018, currency hedging affected the fund with slightly more than -2.50%.

No new liquid bonds have been presented on the primary market during the month. In addition we have seen a number of illiquid emissions beyond the investment mandate of the fund.

Activity has been relatively high on the secondary market and the increasing demands for returns have pressed prices. According to FINRA's Trade Reporting and Compliance Engine (TRACE), more than one hundred individual positions have been traded, several on multiple occasions. The fund has used the market situation and has assumed three positions. During the month, two positions have matured.

After the extreme natural catastrophes in 2017, Entropics has improved key performance indicators for the portfolio and increased its diversification. The number of positions has increased by 18 to 79 compared to a year ago.

Contribution to Expected Loss

Wind Exposure	
Europe	3.41%
Japan	2.54%
Mexico	4.73%
Florida	29.27%

Notes

Strategy and investment focus The investment strategy aims to deliver good risk-adjusted returns by investing responsibly in a globally diversified portfolio of cat bonds covering insurance losses from natural catastrophe risk.

The strategy is based on an underwriting analysis and is balanced, aiming both at minimizing the risk of large single event losses and avoiding to remote risks with small returns.

The investment focus is on wind and earthquake risks in developed regions, such as the United States, Japan and Europe, which are complemented by other natural catastrophe risks. The Fund does not invest in non-natural catastrophe risks, such as life insurance or man-made risks (e.g. terrorism). The only exception from this policy is when there is a small contribution from these perils to the Expected Loss of a multi-peril cat bond, where the main objective is to provide natural catastrophe insurance.

Performance is reported by Swedbank AB and reflects the Fund's Net Asset Value after fees.

Contribution to expected loss is calculated by portfolio modelling in AIR CATRADER, being the industry standard tool used by asset managers and re-insurers worldwide to model and analyse catastrophe bonds and other insurance linked securities.

"Other perils" includes perils other than wind and earthquake, e.g. wildfires and flooding. The portfolio can also include unmodelled risks, such as volcano eruptions and meteorite impacts, with extremely low and uncalculable frequency.

Historical event loss describes the loss as a percentage of the portfolio if these events were to occur today.

Yield to Maturity is calculated before applicable fees in the currencies of respective asset.

Solvency Capital Requirement, SCR (as a monetary amount) for this specific risk is calculated as a percentage of the Assets Under Management (AUM). In accordance with the Solvency 2 directive, a cat bond investment is considered as an insurance risk on the asset side.

A description of the **RI indicators** can be found at Entropics' web site:
